

WikiShed Version 1.0

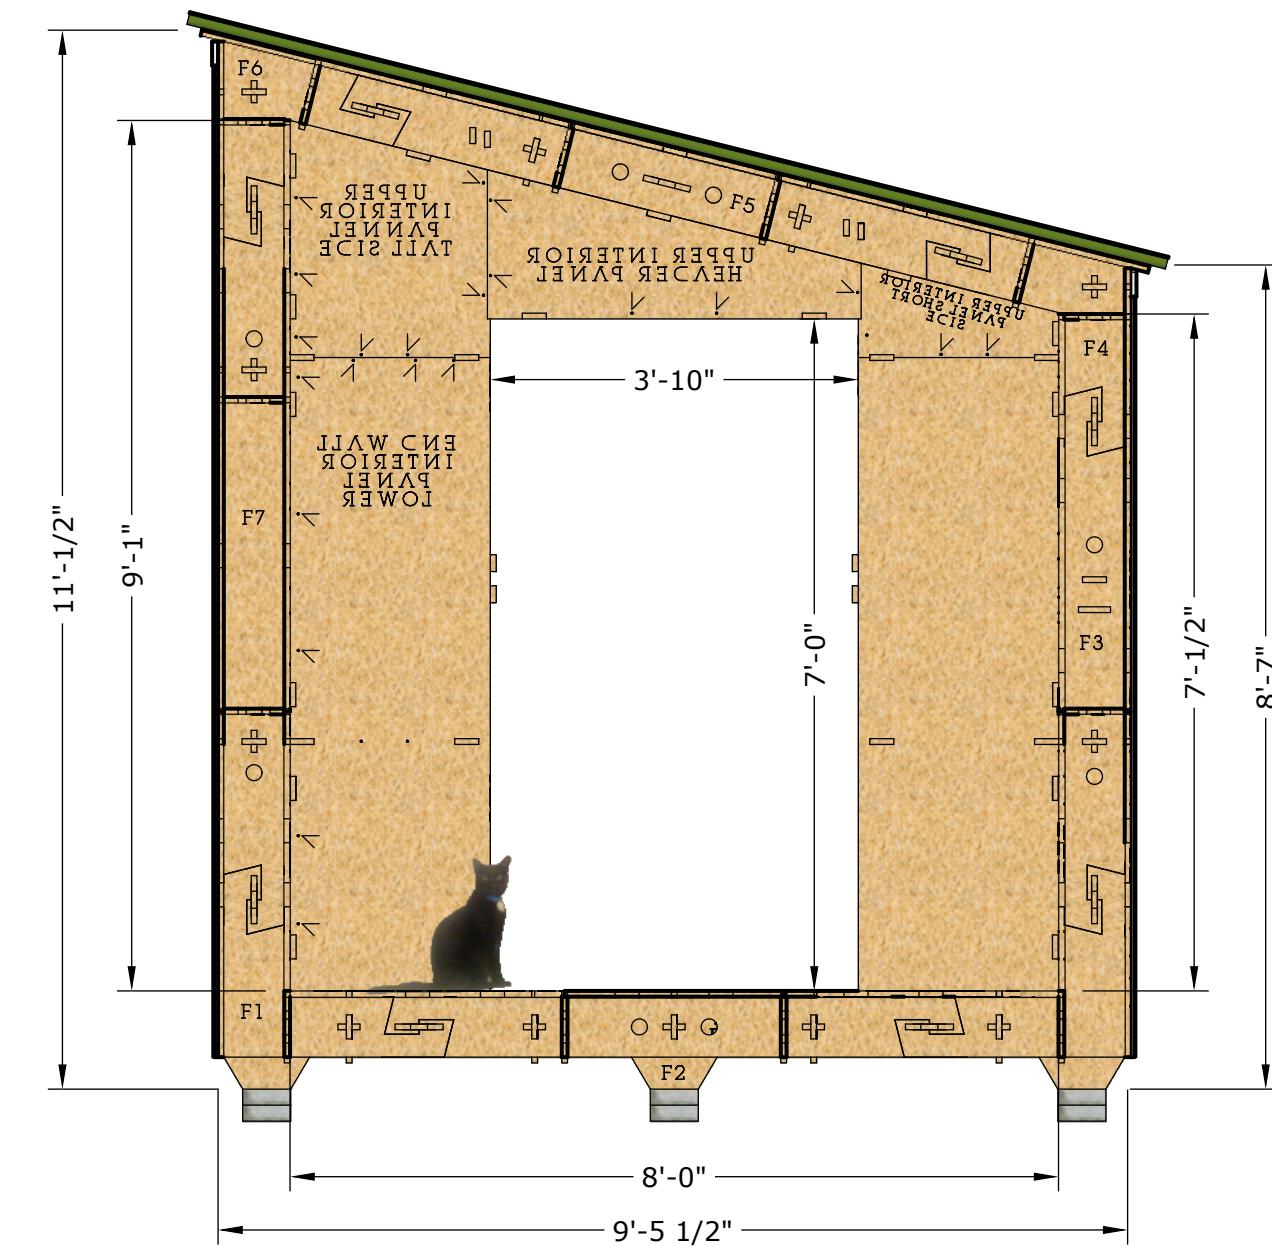

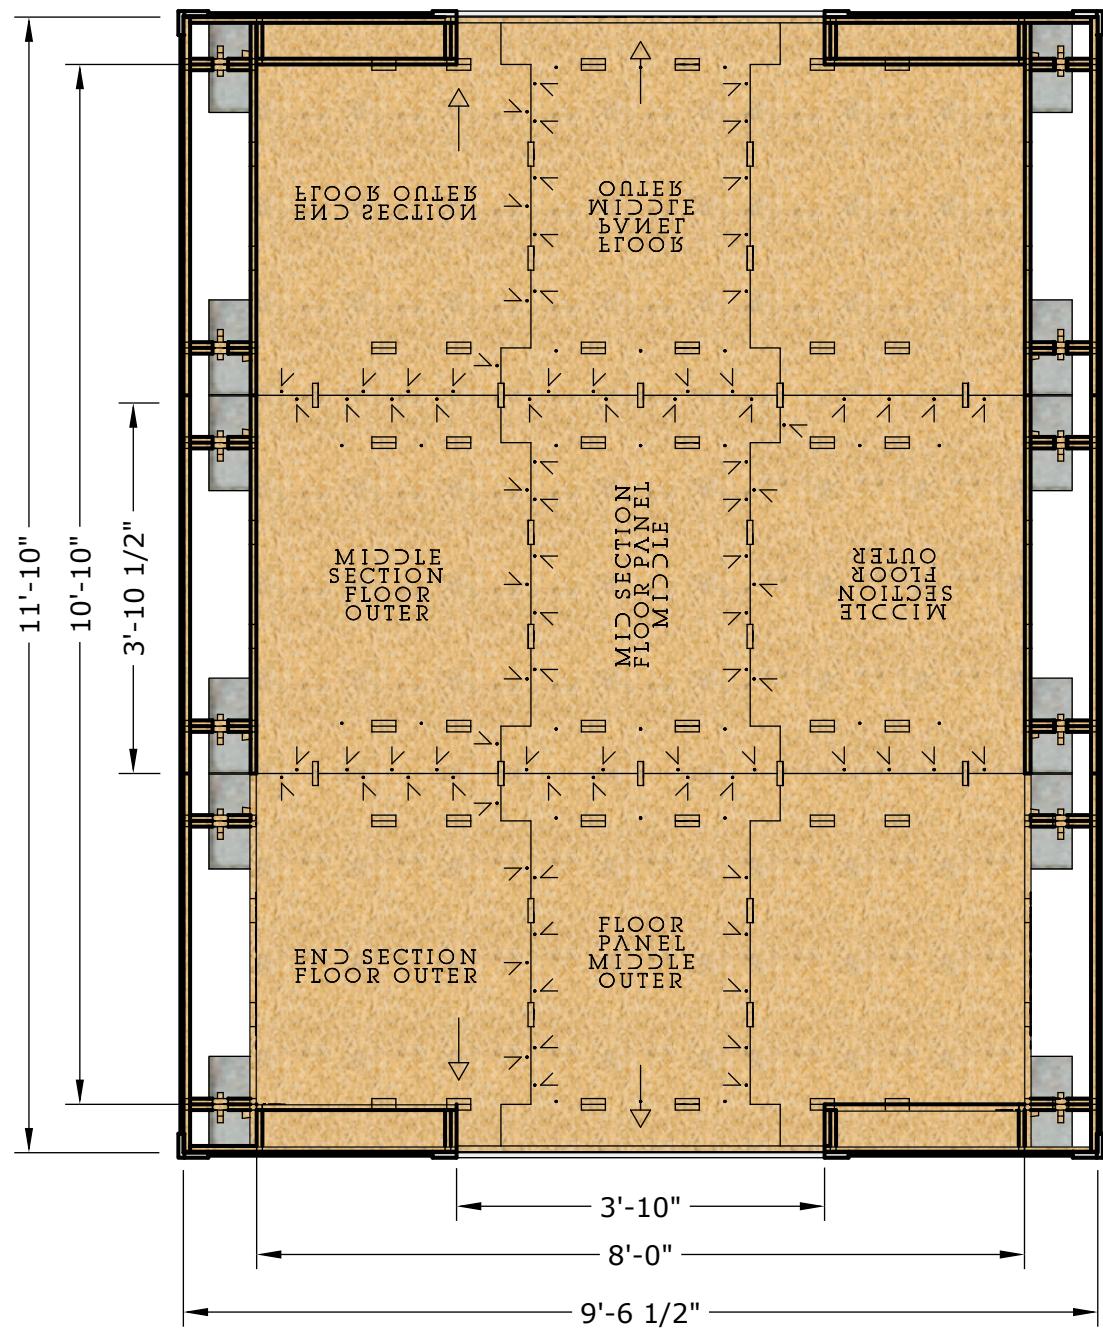

The Wikished is a derivative of the open source project called WikiHouse. (www.WikiHouse.CC)

This shed is designed to be incredibly strong. It will stand up to the heaviest snow loads. It can be assembled in a matter of hours on site

3D View

The Wikished is made up of 3 modules. To create the shed you need two end modules and a center module. To make the shed longer you can add as many center modules as you want. Each center module is ~3'10".
